

# Technical Report for 1.2 Exact Number of Tour Model

iiyu LI %June 2016

## Model Description

The exact number of tour models will predict the exact number of tour for each of the tour purposes that has value 1 as predicted by day pattern model. There are four models in this section (work tour, education tour, shopping tour and other tour). Suppose the day pattern model predicts that the day pattern No. 12 (see `DayPatternChoiceSet51.txt`) is selected where `WorkT=0, EduT=0, ShopT=1` and `OthersT=1`, then we need to run models to determine the exact number of shoping tour and other tour.

## Choice Set

Different model has different choice set:

- Work tour: alternatives are 1 tour, 2 tours, 3 tours.
- Education tour: alternatives are 1 tour and 2 tours.
- Shopping tour: alternatives are 1 tour and 2 tours.
- Other tour: alternatives are 1 tour, 2 tours, 3 tours.

For education and shopping tour, we need only to choose between 1 and 2 tours.

## Model Structure

All 4 models are MNL model. (Although in specification for work tour and other tour, nests are created, but the nest parameters are fixed to one, which is equivalent to MNL)

For **exact number of work tour**:

```

#systematic utility for V1 (1 tour, base alternative)
V_1=0

#systematic utilities for V2-V3 (i=2,3)
#Notice: The utility function contains all the parameters
#no matter estimated or not.

V_i = beta_cons_work_i +
      beta_parttime_work_i * parttime +
      beta_selfemployed_work_i * selfemployed +
      beta_universitystudent_work_i * universitystudent +
      beta_hOMEMAKER_work_i * homemaker +
      beta_retired_work_i * retired +
      beta_unemployed_work_i * unemployed +
      beta_nationalservice_work_i * nationalservice +
      beta_voluntary_work_i * voluntary +
      beta_domestic_work_i * domestic +
      beta_otherworker_work_i * otherworker +
      beta_student16_work_i * student16 +
      beta_student515_work_i * student515 +
      beta_child4_work_i * child4 +
      beta_age2025_work_i * age2025 +
      beta_age2635_work_i * age2635 +
      beta_age5165_work_i * age5165 +
      beta_maleage4_work_i * maleage4 +
      beta_maleage515_work_i * maleage515 +
      beta_femalenone_work_i * femalenone +
      beta_femaleage4_work_i * femaleage4 +
      beta_femaleage515_work_i * femaleage515 +
      beta_onlyadults_work_i * onlyadults +
      beta_onlyworkers_work_i * onlyworkers +
      beta_income_work_i * income +
      beta_workathome_work_i * workathome +
      beta_caravail_work_i * caravail +
      beta_motoravail_work_i * motoravail +
      beta_logsum_work_i * worklogsum

## Variables

Variables used in this model are same with variables in day pattern model. The logsums are the same logsum values used in day pattern model.

## Availability of Alternatives

No Constrains.
